example content in tourist hot spots may only be distributed to devices registered outside the local area. Communications may be both time and place specific, e. Uses of proximity marketing include distribution of media at concerts, information weblinks on local facilities , gaming and social applications, and advertising. Circle-spoke diagram. This circle-spoke diagram sample illustrates the target market concept. A well-defined target market is the first element to a marketing strategy. The marketing mix variables of product, place distribution , promotion and price are the four elements of a marketing mix strategy that determine the success of a product in the marketplace. This circle-spoke diagram sample shows how leadership and data provide essential coordination of other functions in an asset management environment. Leadership points the way and common data systems keep all divisions communicating effectively. It may apply to both tangible assets such as buildings and to intangible concepts such as intellectual property and goodwill. Asset management is a systematic process of operating, maintaining, upgrading, and disposing of assets cost-effectively. Alternative views of asset management in the engineering environment are: the practice of managing assets to achieve the greatest return particularly useful for productive assets such as plant and equipment , and the process of monitoring and maintaining facilities systems, with the objective of providing the best possible service to users appropriate for public infrastructure assets. This circle-spoke diagram sample shows the social determinants of health. It was created on the base of the hub-and-spoke diagram from the Health Canada website. They are risk factors found in one's living and working conditions such as the distribution of income, wealth, influence, and power , rather than individual factors such as behavioural risk factors or genetics that influence the risk for a disease, or vulnerability to disease or injury. According to some viewpoints, these distributions of social determinants are shaped by public policies that reflect the influence of prevailing political ideologies of those governing a jurisdiction. In , the World Health Organization WHO Europe suggested that the social determinants of health included: 1 Social gradients life expectancy is shorter and disease is more common further down the social ladder. This circle-spoke diagram sample shows the Porter five forces model. It was designed on the base of the Wikimedia Commons file: Modelo Porter. It draws upon industrial organization IO economics to derive five forces that determine the competitive intensity and therefore attractiveness of an Industry. Attractiveness in this context refers to the overall industry profitability. An "unattractive" industry is one in which the combination of these five forces acts to drive down overall profitability. A very unattractive industry would be one approaching "pure competition", in which available profits for all firms are driven to normal profit. This analysis is associated with its principal innovator Michael E. Porter of Harvard University. Porter's five forces include â€" three forces from 'horizontal' competition: the threat of substitute products or services, the threat of established rivals, and the threat of new entrants; and two forces from 'vertical' competition: the bargaining power of suppliers and the bargaining power of customers. This circle-spoke diagram sample shows the basic division of thematic maps. This is in contrast to general reference maps, which regularly show the variety of phenomena â€" geological, geographical, political â€" together. The contrast between them lies in the fact that thematic maps use the base data, such as coastlines, boundaries and places, only as points of reference for the phenomenon being mapped. General maps portray the base data, such as landforms, lines of transportation, settlements, and political boundaries, for their own sake. Thematic maps emphasize spatial variation of one or a small number of geographic distributions. These distributions may be physical phenomena such as climate or human characteristics such as population density and health issues. Concept Mappings Diagrams For Solutions. Block Diagram.
